

Zero-order correlation coefficients between implicit and explicit attitudes of one's self and self-reports of psychological victimization.

	<i>Feelings toward self</i>	
	Implicit <sup>a</sup>	Explicit <sup>b</sup>
Isolation & Emotional Control	-.03	-.21 <sup>†</sup>
Undermining self –esteem	-.13	-.33***
Jealousy	.07	-.18
Verbal Abuse	-.03	-.15
Withdrawal	.01	-.32***
Receipt of Abuse Index	-.02	-.28*

Note. Higher numbers of the Psychological Abuse Measure (listed in the left column) indicates a higher frequency of receiving the particular psychologically abusive behavior. Thus, negative correlations indicate that attitudes of self are inversely related to self-reported frequency of psychological victimization. <sup>a</sup>  $N = 84$  (62 females; 22 males). <sup>b</sup>  $N = 83$  (62 females; 21 males). \*\*\*\*  $p < .001$ . \*\*\*  $p < .005$ . \*\*  $p < .01$ . \*  $p < .05$ . <sup>†</sup>  $p < .10$ .

Zero-order correlation coefficients between implicit and explicit attitudes of one's partner and self-reports of psychological victimization.

	<i>Feelings toward partner</i>	
	Implicit <sup>a</sup>	Explicit <sup>b</sup>
Isolation & Emotional Control	-.02	-.39****
Undermining self –esteem	-.07	-.36****
Jealousy	.01	-.33***
Verbal Abuse	-.09	-.454****
Withdrawal	-.18	-.435****
Receipt of Abuse Index	-.09	-.463****

Note. Higher numbers of the Psychological Abuse Measure (listed in the left column) indicates a higher frequency of receiving the particular psychologically abusive behavior. Thus, negative correlations indicate that attitudes of partner are inversely related to self-reported frequency of psychological victimization. <sup>a</sup>  $N = 84$  (62 females; 22 males). <sup>b</sup>  $N = 83$  (62 females; 21 males). \*\*\*\*  $p < .001$ . \*\*\*  $p < .005$ . \*\*  $p < .01$ . \*  $p < .05$ . <sup>†</sup>  $p < .10$ .
