

# POLS/CSSS 510: Maximum Likelihood Methods for the Social Sciences

Christopher Adolph · Associate Professor · Political Science and CSSS

University of Washington  
Fall Quarter 2020

## Class Meets

TTh 4:30–5:50 PM

Taught via Zoom

## Office

All meetings by Zoom

[cado1ph@uw.edu](mailto:cado1ph@uw.edu)

## Section Meets

F 3:30–5:20 PM

Taught via Zoom

## Teaching Assistant

Kenya Amano

[kamano@uw.edu](mailto:kamano@uw.edu)

**Overview and Class Goals.** Most social science data do not fit the assumptions of the linear regression model taught in introductory statistics courses. For example, social science data often consist of discrete categorizations or counts of events, rather than continuous outcomes. Observations may be correlated across periods, as in time series, or clustered into correlated groups, violating the linear regression assumption of independence. In this course, students will learn how use the method of maximum likelihood to derive statistical models that suit the particular behavior of their social science data and how to clearly communicate the substantive import of their findings to a broad audience. In the process, students will gain familiarity with basic statistical programming in R, a free and increasingly popular language. Topics of special interest to students will be covered as time permits.

**Prerequisites.** No specific courses are required; however, students should have a solid grounding in linear regression, as provided, for example, by courses in Political Science (POLS 501 and POLS 503), Sociology (SOC 504 and SOC 506), or Statistics (STAT/CSSS 504). Familiarity with or a willingness to quickly learn basic probability and matrix algebra is also required.

**Course Requirements.** Course evaluation will be based on (1) problem sets: five over the term, due by the start of class on specified dates, (2) a student poster presentation in class, also to be emailed to your instructor as a PDF, and (3) a research paper, due Tuesday 15 December 2019 at 3 PM by email in PDF format.

Students *may* work in small groups on problem sets, but each student must complete and submit their own write-up of the assignment.

Students are **required to collaborate in groups of two or three**<sup>1</sup> on the poster presentation and paper, which should apply methods studied in the course (or with instructor approval, related methods of similar sophistication) to a student-chosen topic. Papers developing new methodological tools are also acceptable. Each paper-writing group must propose a paper topic as part of the first assigned homework, so students should plan to form research partnerships quickly. Additional paper requirements and guidelines can be found on the course website.

**Office Hours.** Chris Adolph: Thursdays, 3:00 – 4:20 PM and by appointment via Zoom. Kenya Amano: Thursdays, 1:00 – 2:00 PM and by appointment via Zoom.

**Course Website.** Consult <http://faculty.washington.edu/cadolph/mle> for problem sets, notes, and announcements.

**On-line Instruction using Zoom.** Due to the COVID-19 epidemic, there will be no in-person instruction in Fall 2020. Accordingly, we will use Zoom to hold course meetings and lab sections. Please visit <https://itconnect.uw.edu/connect/phones/conferencing/zoom-video-conferencing/> to learn more about Zoom, including how to download a free Zoom client available to UW faculty and students. Zoom links and passcodes to regular course and lab meetings will be provided to registered students by email before the first day of class.

<sup>1</sup> This requirement is tentative based on course enrollment.

## Course textbooks

*Books recommended for purchase marked with a \**.

- \*Andrew Gelman and Jennifer Hill. 2007. *Data analysis using regression and multi-level/hierarchical models*. University of Cambridge Press. ISBN: 978-0521686891. *Excellent general introduction to linear regression and hierarchical modeling; good for code and intuition, especially on simulation methods.*
- Gary King. 1989. *Unifying political methodology*. University of Michigan Press. ISBN: 978-0472085545. *Classic introduction to maximum likelihood for social scientists. Emphasis on intuition and basic derivations.*
- J. Scott Long. 1997. *Regression models for categorical and limited dependent variables*. Sage Publications. ISBN: 978-0803973749. *Clear step-by-step introduction to the logic of logistic regression and related models.*
- \*Michael D. Ward and John S. Ahlquist. 2018. *Maximum Likelihood for Social Science: Strategies for Analysis*. Cambridge University Press. ISBN: 978-1316636824. *Main text for the course; written by a former UW professor & a POLS/CSSS alumnus.*
- Alain F. Zuur, Elena N. Ieno, and Erik H.W.G. Meesters. 2009. *A beginner's guide to R*. Springer. ISBN: 978-0387938363. *Straightforward first course in R programming. Assumes you know (or are learning) introductory statistics already.*

## Optional books for further study

- A. Colin Cameron and Pravin K. Trivedi. 2013. *Regression analysis of count data*. 2nd. Ed. Cambridge University Press.
- Norman Matloff. 2011. *The Art of R Programming: A Tour of Statistical Software Design*. No Starch Press.
- Richard McElreath. 2016. *Statistical Rethinking: A Bayesian Course with Examples in R and Stan*. Chapman & Hall/CRC Press.

Will H. Moore and David A. Siegel. 2013. *A Mathematics Course for Political & Social Research*. Princeton University Press.

Required and optional articles

R. Michael Alvarez and Jonathan Nagler. 1998. “When Politics and Models Collide: Estimating Models of Multiparty Elections.” *American Journal of Political Science*. 42(1) 55–96.

William D. Berry, Jacqueline H. R. DeMeritt, and Justin Esarey. 2010. “Testing for Interaction in Binary Logit and Probit Models: Is a Product Term Essential?” *American Journal of Political Science*. 54(1) 243–266.

Kosuke Imai and David A. van Dyk. 2005. “A Bayesian Analysis of the Multinomial Probit Model Using Marginal Data Augmentation.” *Journal of Econometrics*. 124: 311–334.

King, Gary, Michael Tomz, and Jason Wittenberg. 2000. “Making the Most of Statistical Analyses: Interpretation and Presentation” *American Journal of Political Science* 44(2): 341–355.

Raftery, Adrian, 1995. “Bayesian Model Selection in Social Research (with Discussion).” *Sociological Methodology*. 111-196.

Brian Greenhill, Michael D. Ward, and Audrey Sacks. 2011. “The Separation Plot: A New Visual Method for Evaluating the Fit of Binary Models.” *American Journal of Political Science*. 55(4): 990–1002.

## Course outline

This outline of topics is a guideline and may be altered to meet course needs. In particular, the pace of the course may vary to make sure we are moving as fast as possible conditional on everyone understanding the material. Students should come to class having read the material for the next topic to be covered.

Readings from Ward & Ahlquist, King, and Long may at times overlap somewhat; feel free to focus on the sources that best fit your learning style, while bearing in mind that Ward & Ahlquist is the most up-to-date treatment.

*Numbers listed after texts indicate chapters, unless otherwise noted.*

### Part I: Fundamentals

1 October – 8 October: Introduction to the course, probability, and R

*Required:* Handout on probability  
Handout on matrix algebra  
Ward & Ahlquist, p. *xxv-xxvii*

*Optional:* King 3  
Math review: [csss.washington.edu/academics/math-camp/lectures](https://csss.washington.edu/academics/math-camp/lectures)  
Zuur 1–6 (for R beginners)

13–20 October: Overview of maximum likelihood estimation

*Required:* Ward & Ahlquist 1, 2, 4  
*Optional:* Long 1, 2  
King 1, 2, 4

**PROBLEM SET I + PROJECT PROPOSAL DUE THURSDAY 15 OCTOBER IN CLASS**

## Part II: Modeling Choice

22–27 October: Estimating & Interpreting models of binary data

*Required:* Ward & Ahlquist 3 and 6

King 5.1–5.3

King, Tomz, and Wittenberg

*Optional:* Gelman & Hill 5.1–5.3, 6.4, 7.1–7.4

Long 3.1–3.9

Berry, DeMeritt, and Esarey

### **PROBLEM SET 2 DUE TUESDAY 27 OCTOBER IN CLASS**

29 October–3 November: Fitting & selecting models of binary data

*Required:* Ward & Ahlquist 5

Long 4

Gelman & Hill 5.4–5.8, 8.1–8.3

*Optional:* Greenhill, Ward, and Sacks

Raftery

5–10 November: Modeling ordered categorical data

*Required:* Ward & Ahlquist 8

Long 5.1–5.7

*Optional:* King 5.4

### **PROBLEM SET 3 DUE TUESDAY 10 NOVEMBER IN CLASS**

12 November: Non-ordered data: Multinomial logit & Multinomial probit

*Required:* Ward & Ahlquist 9

*Optional:* Long 6

Gelman & Hill 6.5

Alvarez and Nagler

Imai and van Dyk

### Part III: Modeling Counts

17–24 November: Poisson models of counts / Overdispersed & zero-inflated counts

*Required:* Ward & Ahlquist 7, 10

King 5.5–5.9

*Optional:* Long 8.1–8.7

Gelman & Hill 6.2

**PROBLEM SET 4 DUE THURSDAY 19 NOVEMBER IN CLASS**

**NO CLASS THURSDAY 26 NOVEMBER – THANKSGIVING**

### Part IV: Advanced Topics

1–3 December: Missing data and multiple imputation

*Required:* Ward & Ahlquist 12

**PROBLEM SET 5 DUE THURSDAY 3 DECEMBER IN CLASS**

### Part V: Student Poster Presentations

8 – 10 December: Student poster presentations

Students will prepare and present a poster on their research projects in progress; this yields valuable feedback prior to final write-ups. Requirements and suggestions for poster construction will be discussed in class. Presentation dates will be assigned to minimize discrepancy with student preferences. Early presentations are expected to be less complete and evaluated accordingly. Students unable to present on certain days due to schedule conflicts should inform the instructor.

**FINAL PAPER DUE TUESDAY 15 DECEMBER AT 3 PM BY EMAIL**

**Notice Required by State Law.** *Washington state law requires that UW develop a policy for accommodation of student absences or significant hardship due to reasons of faith or conscience, or for organized religious activities. The UW's policy, including more information about how to request an accommodation, is available at Religious Accommodations Policy (<https://registrar.washington.edu/staffandfaculty/religious-accommodations-policy>). Accommodations must be requested within the first two weeks of this course using the Religious Accommodations Request form (<https://registrar.washington.edu/students/religious-accommodations-request>).*

**Other relevant university policies.** See this website:

<https://registrar.washington.edu/staffandfaculty/syllabi-guidelines>
