AMATH 568 Winter Quarter 2023 Professor J. Nathan Kutz

HOMEWORK #1 Due: January 11, 2023

Determine the eigenvalues and eigenvectors (real solutions), (b) sketch the behavior and classify the behavior.

1.
$$\vec{x}' = \begin{pmatrix} 2 & -5 \\ 1 & -2 \end{pmatrix} \vec{x}$$

2.
$$\vec{x}' = \begin{pmatrix} -1 & -1 \\ 0 & -0.25 \end{pmatrix} \vec{x}$$

3.
$$\vec{x}' = \begin{pmatrix} 3 & -4 \\ 1 & -1 \end{pmatrix} \vec{x}$$

4.
$$\vec{x}' = \begin{pmatrix} 2 & -5/2 \\ 9/5 & -1 \end{pmatrix} \vec{x}$$

5.
$$\vec{x}' = \begin{pmatrix} 2 & -1 \\ 3 & -2 \end{pmatrix} \vec{x}$$

6.
$$\vec{x}' = \begin{pmatrix} 1 & \sqrt{3} \\ \sqrt{3} & -1 \end{pmatrix} \vec{x}$$

$$7. \qquad \vec{x}' = \left(\begin{array}{cc} 3 & -2 \\ 2 & -2 \end{array}\right) \vec{x}$$

8. Consider x' = -(x-y)(1-x-y) and y' = x(2+y) and plot the solutions. Verify your qualitative dynamics with MATLAB/Python/fortran.

9. Consider $x' = x - y^2$ and $y' = y - x^2$ and plot the solutions. Verify your qualitative dynamics with MATLAB/Python/fortran.

10. Consider x' = (2+x)(y-x) and y' = (4-x)(y+x) and plot the solutions. Verify your qualitative dynamics with MATLAB/Python/fortran.
