| If 4 MB is required to store one process Consider how much memory is required for an entire OS? With for example 100 processes | | | | | | | |
|--|--|--|--|--|--|--|--|
| Consider how much memory is required for an entire OS? With for example 100 processes | | | | | | | |
| | | | | | | | |
| Page table memory requirement is now 4MB x 100 = 400MB | | | | | | | |
| If computer has 4GB memory (maximum for 32-bits), the page table consumes 10% of memory | | | | | | | |
| 400 MB / 4000 GB | | | | | | | |
| Is this efficient? | | | | | | | |
