3

OBJECTIVES – 9/30

- **Syllabus, Course Introduction**
- C Review Survey
- Background Survey
- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

September 30, 2021 TCSS422: Operating Systems [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.4

4

TCSS 422 – Fall 2021

- **Fall 2021:**
 - **In-person course**
 - Up to 40% of the course can be online without reclassification as a hybrid (H) or distance learning (D) course in response to covid challenges
 - All lectures streamed LIVE via Zoom and recorded for 24/7 availability
 - If not feeling well, please join Zoom live stream
 - In-class activities can be submitted asynchronously, online as needed
 - **Masks are required at all times in the classroom**
 - What is a mask?
 - <https://www.tacoma.uw.edu/sites/default/files/2021-09/facecoveringt21.pdf>
- 19 class meetings
 - 2 Thursday holidays: Nov 11 and 25
- Midterm ~ Thursday Nov 4th
- Final exam Tuesday Dec 14th

TCSS 422
FALL 2021

Welcome Back Huskies!

L1.5

5

RESOURCES

- **Textbook coupon 10% off "BUY10" until Friday at 11:59pm**
- <http://www.lulu.com/shop/remzi-arpaci-dusseau-and-andrea-arpaci-dusseau/operating-systems-three-easy-pieces-softcover-version-100/paperback/product-23779877.html>

September 30, 2021 TCSS422: Operating Systems [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.6

6

TCSS422 – FALL 2021 COMPUTER OPERATING SYSTEMS

- Syllabus
- Grading
- Schedule
- Assignments

See website at:
<http://faculty.washington.edu/willoyd/courses/tcss422>

Website also integrated into Canvas

Enables access using mobile device w/o logging into Canvas

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.7
--------------------	---	------

7

TCS422 COURSE WORK

- **Assignments (45%)**
 - 4 Assignments: roughly every two weeks
 - Submit ALL programming assignments via Canvas
 - Please do not email submissions – they are prone to be lost
 - If Canvas has closed, please request it be reopened...
- **Tutorials/Quizzes/In-class activities (15%)**
 - ~ 6 - 9 total items
 - Drop lowest two
 - Variety of formats: collaborative in class (via Zoom breakout rooms), online, reading, tutorial
- **Exams: Midterm and Final (40%)**
 - In class on Nov 4 and Dec 14
 - Final exam is comprehensive, with emphasis on new material

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.8
--------------------	---	------

8

TCSS 422: PROGRAM DUE DATES

- **Programs - please start early:**

Better than 50% chance of A/B

Less than 50% chance of A/B

From Virginia Tech Department of Computer Science - 2011

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.9
--------------------	---	------

9

TCSS 422: PROGRAMS

- *Tentative - subject to change*
- **Assignment 0:**
Introduction to Linux, Ubuntu Virtual Machine
- **Assignment 1:**
Programming with multiple processes (in C)
- **Assignment 2:**
Multithreaded programming and concurrency (C or Java)
- **Assignment 3:**
Kernel (real) mode programming (in C)

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.10
--------------------	---	-------

10

TCSS 422: PROGRAM DUE DATES

- **Programs - please start early**
- Work as if deadline is several days earlier
- Allows for a “buffer” for running into unexpected problems
 - Underestimation of the task at hand
 - Allows time to seek C help from CSS lab mentors (checking on availability for Fall 2021)
 - If less familiar with C/pointers (TCSS 333/380), **BUDGET MORE TIME**

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.11
--------------------	---	-------

11

UBUNTU 20.04 – VIRTUAL MACHINE

- **Ubuntu 20.04**
 - Open source version of Debian-package based Linux
 - Package management: “apt get” repositories
 - See: <https://packages.ubuntu.com/>
- **Ubuntu Advantages**
 - Enterprise Linux Distribution
 - Free, widely used by developers
 - Long term releases (LTS) every 2 years, good for servers
 - 6-month feature releases, good for sharing new features with the community

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.12
--------------------	---	-------

12

UBUNTU 20.04 – VIRTUAL MACHINE INSTALLATION

- Ubuntu 20.04 on Oracle VirtualBox
- HOW-TO installation videos:
 - Windows 10
 - <https://youtu.be/x3Zpe1rlPFE>
 - Mac OS X
 - <https://youtu.be/HzJl7w882OY>
- > AFTER VirtualBox, INSTALL THE **Guest Additions**
 - **IMPORTANT USABILITY ADD-ON:** Provides file system sharing, clipboard integration, mouse tricks
- <https://youtu.be/Kbez-XdXqrw>

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.13
--------------------	---	-------

13

C PROGRAMING IN TCCS 422

- Many OSEs are coded primarily in C and Assembly Language
- C is a particularly useful language for working with hardware / hardware drivers and operating systems
- C allows writing programs that can directly access the computer's physical memory (in kernel/real mode) providing nearly the power and speed of assembly language
 - *But in a much easier to write high-level language*
- Ideally, all university operating system courses are taught in C/C++. Our textbook is in C/C++
 - *This quarter we will offer the option of assignment of completing assignment 2 in Java (multithreaded programming)*

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.14
--------------------	---	-------

14

C MENTORING

- <https://www.tacoma.uw.edu/set/students/mentors>
- School of Engineering and Technology Mentors
 - Office hours held online via Zoom (in person?)
 - Varied hours and availability based on mentors schedules
 - Monday – Thursday: ~9:30 am – 9:00 pm
 - Friday: ~ 9:30 - 3:30 pm
 - Fall quarter hours will be posted once available
- Student mentors managed by SET's Monika Sobolewska

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.15
--------------------	---	-------

15

INSTRUCTOR HELP

- Office hours: tentative 5:40p TR after class
 - Additional hours based on survey results
 - Also available by appointment
- Take **ownership** of your educational outcome
 - ~10 weeks in TCCS 422 is very small relative to entire IT career
 - Make the most of this **limited** opportunity
 - Maximize your educational investment
 - ***** Ask questions in class *****
 - Also questions after class, email, Canvas discussion boards
 - Seek help using UWT resources, the Internet, YouTube videos (video.google.com) and online tutorials

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.16
--------------------	---	-------

16

CLASS PARTICIPATION

- **Questions and discusson are strongly encouraged**
 - Leverage your educational investment
 - All questions are encouraged!
 - This instructor appreciates questions at all levels – there is no judgement for any question
- **Dally feedback surveys**
 - How much is new vs. review?
 - Checking the pace...
 - What is unclear? It's helpful to know when topics are not clear
 - Use the survey to write questions and feedback that come to you during the lecture
- **Poll-EV**

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.17
--------------------	---	-------

17

OBJECTIVES – 9/30

- Syllabus, Course Introduction
 - **C Review Survey**
 - Background Survey
- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.18
--------------------	---	-------

18

C REVIEW SURVEY
QUIZ 0 – IN CANVAS

September 30, 2021 TCCS422: Operating Systems [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.19

19

OBJECTIVES – 9/30

- Syllabus, Course Introduction
- C Review Survey
- **Background Survey**
- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

September 30, 2021 TCCS422: Operating Systems [Fall 2021]

**PLEASE COMPLETE
BACKGROUND & VM
SURVEYS**

SEE LINKS AT:
<http://faculty.washington.edu/wlloyd/courses/tcss422/announcements.html>

or in Canvas under “Announcements”
we will resume at ~tba pm

September 30, 2021 TCCS422: Operating Systems [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.21

21

**WE WILL RETURN AT
2:40PM**

September 30, 2021 TCCS422: Operating Systems [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.22

22

STUDENT BACKGROUND SURVEY

- Please complete the Student Background Survey
- <https://forms.gle/anQ2BSANhm5yQ4W9>

September 30, 2021 TCCS422: Operating Systems [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma L2.23

23

VIRTUAL MACHINE SURVEY

- Please complete the Virtual Machine Survey to request a “School of Engineering and Technology” remote hosted Ubuntu VM
- <https://forms.gle/V2sg4IW1awvhFx4W8>

September 30, 2021 TCCS422: Operating Systems [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma L2.24

24

OBJECTIVES – 9/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 2: Operating Systems – Three Easy Pieces
 - **Introduction to operating systems**
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

<small>September 30, 2021</small>	<small>TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma</small>	<small>L1.25</small>
-----------------------------------	---	----------------------

25

INTRODUCTION TO OPERATING SYSTEMS

<small>September 30, 2021</small>	<small>TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma</small>	<small>L1.26</small>
-----------------------------------	---	----------------------

26

OBJECTIVES

- **Chapter 2: Operating Systems – Three Easy Pieces**
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - **THREE EASY PIECES:**
 - Virtualizing the CPU
 - Virtualizing Memory
 - Virtualizing I/O
 - Operating system design goals

<small>September 30, 2021</small>	<small>TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma</small>	<small>L1.27</small>
-----------------------------------	---	----------------------

27

OPERATING SYSTEMS

- Responsible for:
 - Making it easy to **run** programs
 - Allowing programs to **share** memory
 - Enabling programs to **interact** with devices

OS is in charge of making sure the system operates correctly and efficiently.

<small>September 30, 2021</small>	<small>TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma</small>	<small>L1.28</small>
-----------------------------------	---	----------------------

28

OBJECTIVES – 9/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - **Management of resources**
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

<small>September 30, 2021</small>	<small>TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma</small>	<small>L1.29</small>
-----------------------------------	---	----------------------

29

RESOURCE MANAGEMENT

- The OS is a resource manager
- Manages CPU, disk, network I/O
- Enables many programs to
 - **Share** the CPU
 - **Share** the underlying physical memory (RAM)
 - **Share** physical devices
 - Disks
 - Network Devices
 - ...

<small>September 30, 2021</small>	<small>TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma</small>	<small>L1.30</small>
-----------------------------------	---	----------------------

30

OBJECTIVES – 9/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - **Concepts of virtualization/abstraction**
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.31
--------------------	---	-------

31

VIRTUALIZATION

- Operating systems present **physical resources** as **virtual representations** to the programs sharing them
 - Physical resources: CPU, disk, memory, ...
 - The virtual form is “**abstract**”
 - The OS presents an illusion that each user program runs in isolation on its own hardware
 - This virtual form is general, powerful, and easy-to-use

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.32
--------------------	---	-------

32

ABSTRACTIONS

- What form of abstraction does the OS provide?
 - CPU
 - Process and/or thread
 - Memory
 - Address space
 - → large array of bytes
 - All programs see the same “size” of RAM
 - Disk
 - Files

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.33
--------------------	---	-------

33

WHY ABSTRACTION?

- Allow applications to reuse common facilities
- Make different devices look the same
 - Easier to write common code to use devices
 - Linux/Unix Block Devices
- Provide higher level abstractions
- More useful functionality

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.34
--------------------	---	-------

34

ABSTRACTION CHALLENGES

- What level of abstraction?
 - How much of the underlying hardware should be exposed?
 - What if **too much**?
 - What if **too little**?
- What are the correct abstractions?
 - Security concerns

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.35
--------------------	---	-------

35

OBJECTIVES – 9/30

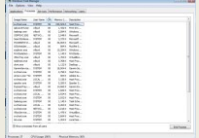

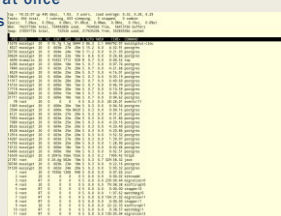

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - **Three Easy Pieces: CPU**, Memory, I/O
 - Concurrency
 - Operating system design goals

September 30, 2021	TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.36
--------------------	---	-------

36

VIRTUALIZING THE CPU

- Each running program gets its own "virtual" representation of the CPU
- Many programs seem to run at once
- Linux: "top" command shows process list
- Windows: task manager

September 30, 2021
TCCS422: Operating Systems (Fall 2021)
School of Engineering and Technology, University of Washington - Tacoma
L1.37

37

VIRTUALIZING THE CPU - 2

- Simple Looping C Program (**simpleloop.c**)

```

1  #include <stdio.h>
2  #include <stdlib.h>
3  #include <sys/time.h>
4  #include <assert.h>
5  #include "common.h"
6
7
8  int
9  main(int argc, char *argv[])
10 {
11     if (argc != 2) {
12         fprintf(stderr, "usage: cpu <string>\n");
13         exit(1);
14     }
15     char *str = argv[1];
16     while (1) {
17         spin(1); // Repeatedly checks the time and
18                 // returns once it has run for a second
19         printf("%s\n", str);
20     }
21 }
```

September 30, 2021
TCCS422: Operating Systems (Fall 2021)
School of Engineering and Technology, University of Washington - Tacoma
L1.38

38

VIRTUALIZING THE CPU - 3

```

prompt> gcc -o cpu cpu.c -Wall
prompt> ./cpu "A"
A
A
A
^C
prompt>
```

- **simpleloop.c**
- Runs forever, must Ctrl-C to halt...

September 30, 2021
TCCS422: Operating Systems (Fall 2021)
School of Engineering and Technology, University of Washington - Tacoma
L1.39

39

VIRTUALIZATION THE CPU - 4

```

prompt> ./cpu A & ; ./cpu B & ; ./cpu C & ; ./cpu D &
(1) 7353
(2) 7354
(3) 7355
(4) 7356
A
B
D
C
A
B
D
C
A
C
B
D
...
```

Even though we have only one processor, all four instances of our program seem to be running at the same time!

September 30, 2021
TCCS422: Operating Systems (Fall 2021)
School of Engineering and Technology, University of Washington - Tacoma
L1.40

40

OBJECTIVES – 9/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - **Three Easy Pieces: CPU, Memory I/O**
 - Concurrency
 - Operating system design goals

September 30, 2021
TCCS422: Operating Systems (Fall 2021)
School of Engineering and Technology, University of Washington - Tacoma
L1.41

41

VIRTUALIZING MEMORY

- Computer memory is treated as a large array of bytes
- Programs store all data in this large array
 - **Read memory (load)**
 - Specify an address to read data from
 - **Write memory (store)**
 - Specify data to write to an address

September 30, 2021
TCCS422: Operating Systems (Fall 2021)
School of Engineering and Technology, University of Washington - Tacoma
L1.42

42

VIRTUALIZING MEMORY - 2

- Program to read/write memory: (**mem.c**) (from ch. 2 pgs. 5-6)

```

1  #include <unistd.h>
2  #include <stdio.h>
3  #include <stdlib.h>
4  #include "common.h"
5
6  int
7  main(int argc, char *argv[])
8  {
9      int *p = malloc(sizeof(int)); // a1: allocate some
10     // memory
11     assert(p != NULL);
12     printf("(8d) address of p: %08x\n",
13           getpid(), (unsigned) p); // a2: print out the
14           // address of the memory
15     *p = 0; // a3: put zero into the first slot of the memory
16     while (1) {
17         spin();
18         *p = *p + 1;
19         printf("(8d) p: %d\n", getpid(), *p); // a4
20     }
21     return 0;
    
```

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.43
--------------------	---	-------

43

VIRTUALIZING MEMORY - 3

- Output of **mem.c** (example from ch. 2 pgs. 5-6)

```

prompt> ./mem
(2134) memory address of p: 00200000
(2134) p: 1
(2134) p: 2
(2134) p: 3
(2134) p: 4
(2134) p: 5
^C
    
```

- int value stored at virtual address 00200000
- program increments int value pointed to by p

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.44
--------------------	---	-------

44

VIRTUALIZING MEMORY - 4

- Multiple instances of **mem.c**

This example no longer works as advertised!
 Ubuntu has been updated.
 The ptr location is no longer identical. This was considered a security issue.

```

prompt> ./mem & ./mem &
[1] 24113
[2] 24114
(24113) memory address of p: 00200000
(24114) memory address of p: 00200000
(24113) p: 1
(24114) p: 1
(24114) p: 2
(24113) p: 2
(24113) p: 3
(24114) p: 3
...
    
```

- IN THE BOOK: (int*)p appears to have the same memory location **00200000**
- Why does modifying the value of *p in program #1 (PID 24113), not interfere with the value of *p in program #2 (PID 24114) ?
 - The OS has "virtualized" memory, and provides a "virtual" address

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.45
--------------------	---	-------

45

VIRTUAL MEMORY

- Key take-aways:
 - Each process (program) has its own **virtual address space**
 - The OS maps virtual **address spaces** onto **physical memory**
 - A memory reference from one process can not affect the address space of others.
 - Isolation**
 - Physical memory, a **shared resource**, is managed by the OS

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.46
--------------------	---	-------

46

OBJECTIVES - 9/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces:** CPU, Memory, **I/O**
 - Concurrency
 - Operating system design goals

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L1.47
--------------------	---	-------

47

PERSISTENCE

- DRAM: Dynamic Random Access Memory: DIMMs/SIMMs
 - Stores data while power is present
 - When power is lost, data is lost (**volatile**)
- Operating System helps "persist" data more **permanently**
 - I/O device(s): hard disk drive (HDD), solid state drive (SSD)
 - File system(s): "catalog" data for storage and retrieval

September 30, 2021	TCCS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma	L2.48
--------------------	---	-------

48

PERSISTENCE - 2

```

1 #include <stdio.h>
2 #include <unistd.h>
3 #include <assert.h>
4 #include <fcntl.h>
5 #include <sys/types.h>
6
7 int
8 main(int argc, char *argv[])
9 {
10     int fd = open("/tmp/file", O_WRONLY | O_CREAT
11                 | O_TRUNC, S_IRWXU);
12     assert(fd > -1);
13     int rc = write(fd, "hello world\n", 13);
14     assert(rc == 13);
15     close(fd);
16     return 0;
    
```

- open(), write(), close(): OS **system calls** for device I/O
- Note: man page for open(), write() requires page number: "man 2 open", "man 2 write", "man close"

September 30, 2021 TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma L2.49

49

PERSISTENCE - 3

- To write to disk, OS must:
 - Determine where on disk data should reside
 - Perform sys calls to perform I/O:
 - Read/write to file system (*inode record*)
 - Read/write data to file
- OS provides fault tolerance for system crashes
 - Journaling: Record disk operations in a journal for replay
 - Copy-on-write: replicate shared data across multiple disks - see *ZFS filesystem*
 - Carefully order writes on disk (*especially spindle drives*)

September 30, 2021 TCSS422: Operating Systems (Fall 2021) School of Engineering and Technology, University of Washington - Tacoma L2.50

53

CONCURRENCY - 2

```

1 #include <stdio.h>
2 #include <stdlib.h>
3 #include "common.h"
4
5 volatile int counter = 0;
6 int loops;
7
8 void
9
10
11
12
13
14 }
15 ...
    
```

Not the same as Java volatile:
 Provides a compiler hint that an object may change value unexpectedly (in this case by a separate thread) so aggressive optimization must be avoided.

pthread.c

Listing continues ...

54

CONCURRENCY - 3

```

16  int
17  main(int argc, char *argv[])
18  {
19      if (argc != 2) {
20          fprintf(stderr, "usage: threads <value>\n");
21          exit(1);
22      }
23      loops = atoi(argv[1]);
24      pthread_t p1, p2;
25      printf("Initial value : %d\n", counter);
26
27      pthread_create(&p1, NULL, worker, NULL);
28      pthread_create(&p2, NULL, worker, NULL);
29      pthread_join(p1, NULL);
30      pthread_join(p2, NULL);
31      printf("Final value : %d\n", counter);
32      return 0;
33  }
    
```

- Program creates two threads
- Check documentation: "man pthread_create"
- worker() method counts from 0 to argv[1] (loop)

```

PTHREAD_CREATE(3)      Linux Programmer's Manual      PTHREAD_CREATE(3)

NAME
  pthread_create - create a new thread

SYNOPSIS
  #include <pthread.h>

  int pthread_create(pthread_t *thread, const pthread_attr_t *attr,
                    void *(*start_routine)(void *), void *arg);

  Compile and link with -pthread.

DESCRIPTION
  The pthread_create() function starts a new thread in the calling
  process. The new thread starts execution by invoking
  start_routine(). arg is passed as the sole argument of
  start_routine().

  The new thread terminates in one of the following ways:
  * It calls pthread_exit(), specifying an exit status value that is
    available to another thread in the same process that calls
    pthread_join().
  * It returns from start_routine(). This is equivalent to calling
    pthread_exit() with the value supplied in the return statement.
  * It is canceled (see pthread_cancel()).

  Any of the threads in the process calls exit(), or the main thread
  performs a return from main(). This causes the termination of all
  threads in the process.

  The attr argument points to a pthread_attr_t structure whose contents
  are used at thread creation time to determine attributes for the new
  thread; this structure is initialized using pthread_attr_t and
  related functions. If attr is NULL, then the thread is created with
  default attr values.
    
```

- Command line parameter argv[1] provides loop length
- Defines number of times the shared counter is incremented
- Loops: 1000

```

prompt> gcc -o pthread pthread.c -Wall -pthread
prompt> ./pthread 1000
Initial value : 0
Final value : 2000
    
```

- Loops 100000

```

prompt> ./pthread 100000
Initial value : 0
Final value : 143012 // huh??
prompt> ./pthread 100000
Initial value : 0
Final value : 137298 // what ???
    
```

- When loop value is large why do we not achieve 200,000 ?
- C code is translated to (3) assembly code operations
 - Load counter variable into register
 - Increment it
 - Store the register value back in memory
- These instructions happen concurrently and VERY FAST
- (P1 || P2) write incremented register values back to memory, While (P1 || P2) read same memory
- Memory access here is **unsynchronized (non-atomic)**
- Some of the increments are lost

To perform parallel work, a single process may:

A

Launch multiple threads to execute code in parallel while sharing global data in memory

B

Launch multiple processes to execute code in parallel while sharing global data in memory

C

Both A and B

D

None of the above

61

SUMMARY: OPERATING SYSTEM DESIGN GOALS

- **ABSTRACTING THE HARDWARE**
 - Makes programming code easier to write
 - Automate sharing resources – save programmer burden
- **PROVIDE HIGH PERFORMANCE**
 - Minimize overhead from OS abstraction (Virtualization of CPU, RAM, I/O)
 - Share resources fairly
 - Attempt to tradeoff performance vs. fairness → consider priority
- **PROVIDE ISOLATION**
 - User programs can't interfere with each other's virtual machines, the underlying OS, or the sharing of resources

--------------------	---	-------

62

SUMMARY: OPERATING SYSTEM DESIGN GOALS - 2

- **RELIABILITY**
 - OS must not crash, 24/7 Up-time
 - Poor user programs must not bring down the system:

Blue Screen
- Other Issues:
 - Energy-efficiency
 - Security (of data)
 - Cloud: Virtual Machines
