OBJECTIVES – 3/30

Operating Systems

Three Easy Pieces.

- **Syllabus, Course Introduction**
- C Review Survey
- Background Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 30, 2021 TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.5

TCSS 422 – Spring 2021

- **Online is green...**
 - 100% reduction of carbon footprint from transit
- Saves commuting time
 - Less fuel expenses
- Easier to achieve perfect attendance – all lectures streamed LIVE, recorded for 24/7 availability
- 20 class meetings
 - 1 Monday holiday in Spring: May 31
- Final exam Thursday June 10th

TCSS 422 SPRING 2021 L1.6

SILVER LINING FOR ONLINE LEARNING

- **ONLINE LEARNING:** practice use of technology for remote collaborative work
- Professor conducted Masters thesis research at VA Tech on distributed remote work in early 2000s
- Computer Science is a unique field where you can work in a job entirely remotely from home or from any location
- Colleague from undergrad, Scott Teresi, MS in CS from Univ of Illinois – works for British company remotely for over a decade
 - Well paid!
 - Never physically met boss until company was recently bought
 - Before covid – now making occasional trips to the UK

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.7
----------------	---	------

RESOURCES FOR SPRING 2021

- **Low Cost or Free Technology Services from UW Tacoma:**
 - <https://www.tacoma.uw.edu/about-uw-tacoma/low-cost-or-free-technology-services>
- **Resources for students during the Coronavirus pandemic:**
 - <https://www.tacoma.uw.edu/chancellor/resources-students-during-coronavirus-pandemic>
 - <https://www.tacoma.uw.edu/uwt/it/it-resources-telework-and-attending-class-remotely>
- **UW Tacoma Information Technology & Library Laptops for loan:**
 - <https://itconnect.uw.edu/work/working-remotely/technology-for-working-remotely/acquiring-computers-and-hardware-for-working-remotely/>
 - <https://www.tacoma.uw.edu/learning-research-commons/laptops-available-checkout>

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.8
----------------	---	------

RESOURCES - 2

- **Textbook coupon 10% off "WRITER10" until Friday at 11:59pm**
- <http://www.lulu.com/shop/remzi-arpaci-dusseau-and-andrea-arpaci-dusseau/operating-systems-three-easy-pieces-softcover-version-100/paperback/product-23779877.html>

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.9
----------------	---	------

TCCS422 – SPRING 2021 COMPUTER OPERATING SYSTEMS

- Syllabus
- Grading
- Schedule
- Assignments

See website at:
<http://faculty.washington.edu/wloyd/courses/tccs422>

Enables access using mobile device w/o logging into Canvas

Website also Integrated into Canvas

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.10
----------------	---	-------

TCS422 COURSE WORK

- **Assignments (45%)**
 - 4 Assignments: roughly every two weeks
 - Submit ALL programming assignments via Canvas – no email
 - Email submissions are prone to be lost
- **Tutorials/Quizzes/In-class activities (15%)**
 - ~ 5-6 quizzes
 - Drop lowest two
 - Variety of formats: collaborative in class (via Zoom breakout rooms), online, reading, tutorial
- **Exams: Midterm and Final (40%)**
 - Online via the Canvas system
 - Final exam is comprehensive, with emphasis on new material

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.11
----------------	---	-------

TCCS 422: PROGRAM DUE DATES

- **Programs - please start early:**

When do students start working?

From Virginia Tech Department of Computer Science - 2011

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.12
----------------	---	-------

TCCS 422: PROGRAMS

- *Tentative - subject to change*
- **Assignment 0:**
Introduction to Linux, Ubuntu Virtual Machine
- **Assignment 1:**
Programming with multiple processes (in C)
- **Assignment 2:**
Multithreaded programming and concurrency (C or Java)
- **Assignment 3:**
Kernel (real) mode programming (in C)

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.13
----------------	---	-------

TCCS 422: PROGRAM DUE DATES

- **Programs - please start early**
 - Work as if deadline is several days earlier
 - Allows for a “buffer” for running into unexpected problems
 - Underestimation of the task at hand
 - Allows time to seek C help from CSS lab mentors (*checking on availability for Spring 2021*)
 - If less familiar with C/pointers (TCCS 333/380),
BUDGET MORE TIME

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.14
----------------	---	-------

UBUNTU 20.04 – VIRTUAL MACHINE

- Ubuntu 20.04
 - Open source version of Debian-package based Linux
 - Package management: “apt get” repositories
 - See: <https://packages.ubuntu.com/>
- Ubuntu Advantages
 - Enterprise Linux Distribution
 - Free, widely used by developers
 - Long term releases (LTS) every 2 years, good for servers
 - 6 month feature releases, good for sharing new features with the community

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.15
----------------	---	-------

UBUNTU 20.04 – VIRTUAL MACHINE INSTALLATION

- Ubuntu 20.04 on Oracle VirtualBox
- HOW-TO installation videos:
 - Windows 10
▪ <https://youtu.be/x3Zpe1rlPFE>
 - Mac OS X
▪ <https://youtu.be/Hzjl7w8820Y>
- > AFTER VirtualBox, INSTALL THE **Guest Additions**
 - **IMPORTANT USABILITY ADD-ON:** Provides file system sharing, clipboard integration, mouse tricks
 - <https://youtu.be/Kbez-XdXqrw>

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.16
----------------	---	-------

C PROGRAMING IN TCCS 422

- Many OSEs are coded primarily in C and Assembly Language
- C is a particularly useful language for working with hardware / hardware drivers and operating systems
- C allows writing programs that can directly access the computer’s physical memory (in kernel/real mode) providing nearly the power and speed of assembly language
 - *But in a much easier to write high-level language*
- Ideally, all university operating system courses are taught in C/C++. Our textbook is in C/C++
 - *This quarter we will offer the option of assignment of completing assignment 2 in Java (multithreaded programming)*

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.17
----------------	---	-------

C MENTORING

- <https://www.tacoma.uw.edu/institute-technology/student-support-workshops-mentors>
- School of Engineering and Technology Mentors
- Office hours held online via Zoom
- Varied hours and availability based on mentors schedules
- Monday – Thursday: ~9:30 am – 9:00 pm
- Friday: ~ 9:30 - 3:30 pm
- Spring quarter hours will be posted once available
- Student mentors managed by SET Monika Sobolewska

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.18
----------------	---	-------

INSTRUCTOR HELP

- Office hours: tentative 5:40p TR after class
 - Additional hours based on survey results
 - Also available by appointment
- Take **ownership** of your educational outcome
 - 10 weeks spent in TCSS 422 is very small relative to entire IT career
 - Make the most of this **limited** opportunity
 - Maximize your educational investment
 - ***** Ask questions in class on zoom !! *****
 - Also questions after class, email, Canvas discussion boards
 - Seek help using UWT resources, the internet, YouTube videos (video.google.com) and online tutorials

March 30, 2021 TCSS422: Operating Systems [Spring 2021] L1.19
 School of Engineering and Technology, University of Washington - Tacoma

CLASS PARTICIPATION

- **Questions and discussion are strongly encouraged**
 - Leverage your educational investment
 - All questions are encouraged!
 - This instructor appreciates questions at all levels – there is no judgement for any question
- **Daily feedback surveys**
 - How much is new vs. review?
 - Checking the pace...
 - What is unclear? It's helpful to know when topics are not clear
 - Use the survey to write questions and feedback that come to you during the lecture
- **Poll-EV**

March 30, 2021 TCSS422: Operating Systems [Spring 2021] L1.20
 School of Engineering and Technology, University of Washington - Tacoma

OBJECTIVES – 3/30

- Syllabus, Course Introduction
- **C Review Survey**
- Background Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 30, 2021 TCSS422: Operating Systems [Spring 2021] L1.21
 School of Engineering and Technology, University of Washington - Tacoma

C REVIEW SURVEY

March 30, 2021 TCSS422: Operating Systems [Spring 2021] L1.22
 School of Engineering and Technology, University of Washington - Tacoma

OBJECTIVES – 3/30

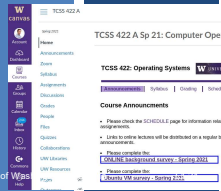

- Syllabus, Course Introduction
- C Review Survey
- **Background Survey**
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 30, 2021 TCSS422: Operating Systems [Spring 2021] L1.23
 School of Engineering and Technology, University of Washington - Tacoma

BACKGROUND & VM SURVEYS

SEE LINKS AT:
<http://faculty.washington.edu/wlloyd/courses/tcss422/announcements.html>
 or in Canvas under “Announcements”

we will resume at ~4:50pm

March 30, 2021 TCSS422: Operating Systems [Spring 2021] L1.24
 School of Engineering and Technology, University of Washington - Tacoma

**WE WILL RETURN AT
4:50PM**

March 30, 2021 TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.25

STUDENT BACKGROUND SURVEY

- Please complete the Student Background Survey
- <https://forms.gle/yr6Dc9x9rX516U6t6>

March 30, 2021 TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma L2.26

VIRTUAL MACHINE SURVEY

- Please complete the Virtual Machine Survey to request a "School of Engineering and Technology" remote hosted Ubuntu VM
- <https://forms.gle/BR2G1wr9RDBVB9AK8>

March 30, 2021 TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma L2.27

OBJECTIVES – 3/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - **Introduction to operating systems**
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 30, 2021 TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.28

**INTRODUCTION TO
OPERATING SYSTEMS**

March 30, 2021 TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.29

OBJECTIVES

- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - THREE EASY PIECES:
 - Virtualizing the CPU
 - Virtualizing Memory
 - Virtualizing I/O
 - Operating system design goals

March 30, 2021 TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma L1.30

OPERATING SYSTEMS

- Responsible for:
 - Making it easy to **run** programs
 - Allowing programs to **share** memory
 - Enabling programs to **Interact** with devices

OS is in charge of making sure the system operates **correctly and efficiently.**

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.31
----------------	---	-------

OBJECTIVES – 3/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - **Management of resources**
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.32
----------------	---	-------

RESOURCE MANAGEMENT

- The OS is a resource manager
- Manages CPU, disk, network I/O
- Enables many programs to
 - **Share** the CPU
 - **Share** the underlying physical memory (RAM)
 - **Share** physical devices
 - Disks
 - Network Devices
 - ...

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.33
----------------	---	-------

OBJECTIVES – 3/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - **Management of resources**
 - **Concepts of virtualization/abstraction**
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.34
----------------	---	-------

VIRTUALIZATION

- Operating systems present **physical resources** as **virtual representations** to the programs sharing them
 - Physical resources: CPU, disk, memory, ...
- The virtual form is **“abstract”**
- The OS presents an illusion that each user program runs in isolation on its own hardware
- This virtual form is general, powerful, and easy-to-use

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.35
----------------	---	-------

ABSTRACTIONS

- What form of abstraction does the OS provide?
 - CPU
 - Process and/or thread
 - Memory
 - Address space
 - → large array of bytes
 - All programs see the same “size” of RAM
 - Disk
 - Files

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.36
----------------	---	-------

WHY ABSTRACTION?

- Allow applications to reuse common facilities
- Make different devices look the same
 - Easier to write common code to use devices
 - Linux/Unix Block Devices
- Provide higher level abstractions
- More useful functionality

March 30, 2021
TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma
L1.37

ABSTRACTION CHALLENGES

- What level of abstraction?
 - How much of the underlying hardware should be exposed?
 - What if **too much**?
 - What if **too little**?
- What are the correct abstractions?
 - Security concerns

March 30, 2021
TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma
L1.38

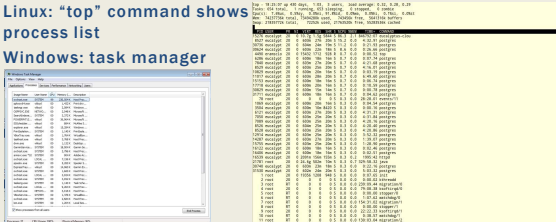

OBJECTIVES – 3/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - **Three Easy Pieces: CPU**, Memory, I/O
 - Concurrency
 - Operating system design goals

March 30, 2021
TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma
L1.39

VIRTUALIZING THE CPU

- Each running program gets its own “virtual” representation of the CPU
- Many programs seem to run at once
- Linux: “top” command shows process list
- Windows: task manager

March 30, 2021
TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma
L1.40

VIRTUALIZING THE CPU - 2

- Simple Looping C Program

```

1  #include <stdio.h>
2  #include <stdlib.h>
3  #include <sys/time.h>
4  #include <assert.h>
5  #include "common.h"
6
7  int
8  main(int argc, char *argv[])
9  {
10     if (argc != 2) {
11         fprintf(stderr, "usage: cpu <string>\n");
12         exit(1);
13     }
14     char *str = argv[1];
15     while (1) {
16         Spin(1); // Repeatedly checks the time and
17                 // returns once it has run for a second
18         printf("%s\n", str);
19     }
20     return 0;
    
```

March 30, 2021
TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma
L1.41

VIRTUALIZING THE CPU - 3

```

prompt> gcc -o cpu cpu.c -Wall
prompt> ./cpu "A"
A
A
A
A
C
prompt>
    
```

- Runs forever, must Ctrl-C to halt...

March 30, 2021
TCSS422: Operating Systems [Spring 2021]
School of Engineering and Technology, University of Washington - Tacoma
L1.42

VIRTUALIZATION THE CPU - 4

```

prompt> ./cpu A & ; ./cpu B & ; ./cpu C & ; ./cpu D &
[1] 7353
[2] 7354
[3] 7355
[4] 7356
A
B
D
C
A
B
D
C
A
C
B
D
...
    
```

Even though we have only one processor, all four instances of our program seem to be running at the same time!

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.43
----------------	---	-------

OBJECTIVES – 3/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.44
----------------	---	-------

VIRTUALIZING MEMORY

- Computer memory is treated as a large array of bytes
- Programs store all data in this large array
 - Read memory (load)
 - Specify an address to read data from
 - Write memory (store)
 - Specify data to write to an address

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.45
----------------	---	-------

VIRTUALIZING MEMORY - 2

■ Program to read/write memory:

```

1  #include <unistd.h>
2  #include <stdio.h>
3  #include <stdlib.h>
4  #include "common.h"
5
6  int
7  main(int argc, char *argv[])
8  {
9      int *p = malloc(sizeof(int)); // a1: allocate some
10     //memory
11     assert(p != NULL);
12     printf("(%)d address of p: %08x\n",
13            getpid(), (unsigned) p); // a2: print out the
14            //address of the memory
15     *p = 0; // a3: put zero into the first slot of the memory
16     while (1) {
17         Spin(1);
18         *p = *p + 1;
19         printf("(%)d p: %d\n", getpid(), *p); // a4
20     }
21     return 0;
22 }
    
```

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.46
----------------	---	-------

VIRTUALIZING MEMORY - 3

■ Output of mem.c

```

prompt> ./mem
(2134) memory address of p: 00200000
(2134) p: 1
(2134) p: 2
(2134) p: 3
(2134) p: 4
(2134) p: 5
^C
    
```

- int value stored at 00200000
- program increments int value

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.47
----------------	---	-------

VIRTUALIZING MEMORY - 4

■ Multiple instances of mem.c

```

prompt> ./mem & ; ./mem &
[1] 24113
[2] 24114
(24113) memory address of p: 00200000
(24114) memory address of p: 00200000
(24113) p: 1
(24114) p: 1
(24114) p: 2
(24113) p: 2
(24113) p: 3
(24114) p: 3
...
    
```

- (int*)p receives the same memory location 00200000
- Why does modifying (int*)p in program #1 (PID=24113), not interfere with (int*)p in program #2 (PID=24114) ?
 - The OS has "virtualized" memory, and provides a "virtual" address

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.48
----------------	---	-------

VIRTUAL MEMORY

- Key take-aways:
 - Each process (program) has its own **virtual address space**
 - The OS maps virtual **address spaces** onto **physical memory**
 - A memory reference from one process can not affect the address space of others.
 - **Isolation**
 - Physical memory, a **shared resource**, is managed by the OS

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.49
----------------	---	-------

OBJECTIVES – 3/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - **Three Easy Pieces: CPU, Memory, I/O**
 - Concurrency
 - Operating system design goals

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.50
----------------	---	-------

PERSISTENCE

- DRAM: Dynamic Random Access Memory: DIMMs/SIMMs
 - Stores data while power is present
 - When power is lost, data is lost (**volatile**)
- Operating System helps “persist” data more **permanently**
 - I/O device(s): hard disk drive (HDD), solid state drive (SSD)
 - File system(s): “catalog” data for storage and retrieval

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L2.51
----------------	---	-------

PERSISTENCE - 2

```

1  #include <stdio.h>
2  #include <unistd.h>
3  #include <assert.h>
4  #include <fcntl.h>
5  #include <sys/types.h>
6
7  int
8  main(int argc, char *argv[])
9  {
10     int fd = open("/tmp/file", O_WRONLY | O_CREAT
11                 | O_TRUNC, S_IRWXU);
12     assert(fd > -1);
13     int rc = write(fd, "hello world\n", 13);
14     assert(rc == 13);
15     close(fd);
16     return 0;
    
```

- **open(), write(), close(): OS system calls for device I/O**
- Note: man page for open(), write() require page number: “man 2 open”, “man 2 write”, “man close”

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L2.52
----------------	---	-------

PERSISTENCE - 3

- To write to disk, OS must:
 - Determine where on disk data should reside
 - Perform sys calls to perform I/O:
 - Read/write to file system (*inode record*)
 - Read/write data to file
- Provide fault tolerance for system crashes
 - Journaling: Record disk operations in a journal for replay
 - Copy-on-write - replicating shared data - see *ZFS*
 - Carefully order writes on disk

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L2.53
----------------	---	-------

OBJECTIVES – 3/30

- Syllabus, Course Introduction
- C Review Survey
- Background Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - **Concurrency**
 - Operating system design goals

March 30, 2021	TCCS422: Operating Systems [Spring 2021] School of Engineering and Technology, University of Washington - Tacoma	L1.54
----------------	---	-------

CONCURRENCY

- Linux: 654 tasks
- Windows: 37 processes
- The **OS** appears to run many programs at once, juggling them
- Modern **multi-threaded** programs feature concurrent threads and processes
- **What is a key difference between a process and a thread?**

CONCURRENCY - 2

```

1 #include <stdio.h>
2 #include <stdlib.h>
3 #include "common.h"
4
5 volatile int counter = 0;
6 int loops;
7
8 void
9
10
11
12
13 }
14
15 ...
    
```

Not the same as Java volatile:
 Provides a compiler hint that an object may change value unexpectedly (in this case by a separate thread) so aggressive optimization must be avoided.

CONCURRENCY - 3

```

16 int
17 main(int argc, char *argv[])
18 {
19     if (argc != 2) {
20         fprintf(stderr, "usage: threads <value>\n");
21         exit(1);
22     }
23     loops = atoi(argv[1]);
24     pthread_t p1, p2;
25     printf("Initial value : %d\n", counter);
26
27     pthread_create(&p1, NULL, worker, NULL);
28     pthread_create(&p2, NULL, worker, NULL);
29     pthread_join(p1, NULL);
30     pthread_join(p2, NULL);
31     printf("Final value : %d\n", counter);
32     return 0;
33 }
    
```

- Program creates two threads
- Check documentation: "man pthread_create"
- worker() method counts from 0 to argv[1] (loop)

PTHREAD_CREATE(3)      Linux Programmer's Manual      PTHREAD_CREATE(3)

NAME
 pthread_create - create a new thread

SYNOPSIS
 #include <pthread.h>

 int pthread_create(pthread_t *thread, const pthread_attr_t *attr,
 void *(*start_routine)(void *), void *arg);

Compile and link with -pthread.

DESCRIPTION
 The pthread_create() function starts a new thread in the calling process. The new thread starts execution by invoking start_routine(); arg is passed as the sole argument of start_routine().

The new thread terminates in one of the following ways:
 * It calls pthread_exit(3), specifying an exit status value that is available to another thread in the same process that calls pthread_join(3).
 * It returns from start_routine(). This is equivalent to calling pthread_exit(3) with the value supplied in the return statement.
 * It is canceled (see pthread_cancel(3)).
 * Any of the threads in the process calls exit(3), or the main thread performs a return from main(). This causes the termination of all threads in the process.

The attr argument points to a pthread_attr_t structure whose contents are used at thread creation time to determine attributes for the new thread; this structure is initialized using pthread_attr_init(3) and related functions. If attr is NULL, then the thread is created with default attributes.

- Command line parameter argv[1] provides loop length
- Defines number of times the shared counter is incremented
- Loops: 1000

```

prompt> gcc -o thread thread.c -Wall -pthread
prompt> ./thread 1000
Initial value : 0
Final value : 2000
    
```

- Loops 100000

```

prompt> ./thread 100000
Initial value : 0
Final value : 143012 // huh??
prompt> ./thread 100000
Initial value : 0
Final value : 137298 // what the??
    
```

- When loop value is large why do we not achieve 200000 ?
- C code is translated to (3) assembly code operations
 1. Load counter variable into register
 2. Increment it
 3. Store the register value back in memory
- These instructions happen concurrently and VERY FAST
- (P1 || P2) write incremented register values back to memory, While (P1 || P2) read same memory
- Memory access here is **unsynchronized (non-atomic)**
- Some of the increments are lost

W To perform parallel work, a single process may:

A

Launch multiple threads to execute code in parallel while sharing global data in memory

B

Launch multiple processes to execute code in parallel while sharing global data in memory

C

Both A and B

D

None of the above

L1.64

SUMMARY: OPERATING SYSTEM DESIGN GOALS

- **ABSTRACTING THE HARDWARE**
 - Makes programming code easier to write
 - Automate sharing resources – save programmer burden
- **PROVIDE HIGH PERFORMANCE**
 - Minimize overhead from OS abstraction (Virtualization of CPU, RAM, I/O)
 - Share resources fairly
 - Attempt to tradeoff performance vs. fairness → consider priority
- **PROVIDE ISOLATION**
 - User programs can't interfere with each other's virtual machines, the underlying OS, or the sharing of resources

L2.65

SUMMARY: OPERATING SYSTEM DESIGN GOALS - 2

- **RELIABILITY**
 - OS must not crash, 24/7 Up-time
 - Poor user programs must not bring down the system:

Blue Screen

- Other Issues:
 - Energy-efficiency
 - Security (of data)
 - Cloud: Virtual Machines
