STUB GENERATION - 2							
 Interfaces are specified using an Interface Definition Language (IDL) 							
Interface specifications in IDL are used to generate language specific stubs							
IDL is compiled into client and server-side stubs							
Much of the plumbing for RPC involves maintaining boilerplate-code							
February 25, 2021 TCSS558: Applied Distributed Computing [Winter 2021] School of Engineering and Technology, University of Washington - Tacoma L14.31							

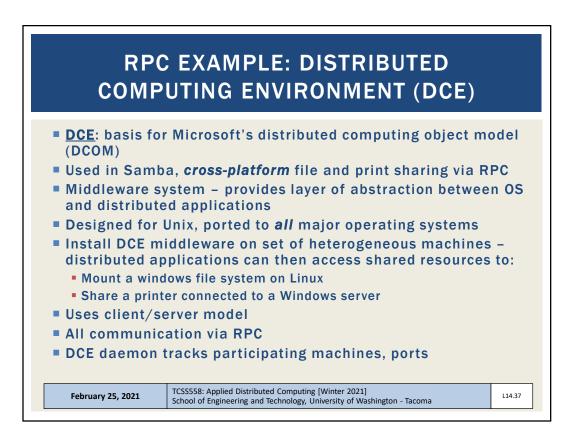

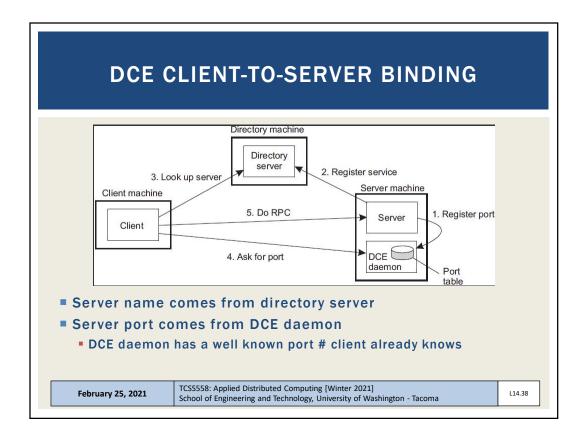

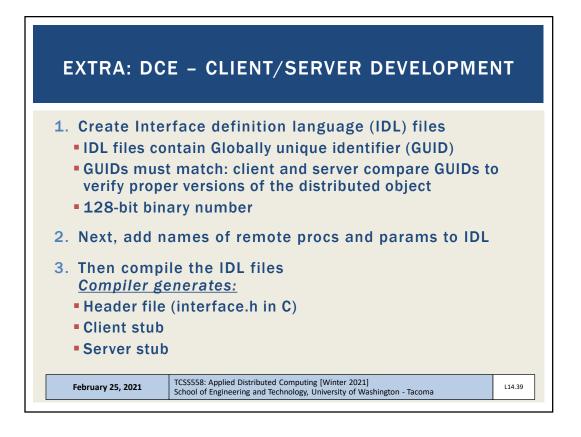

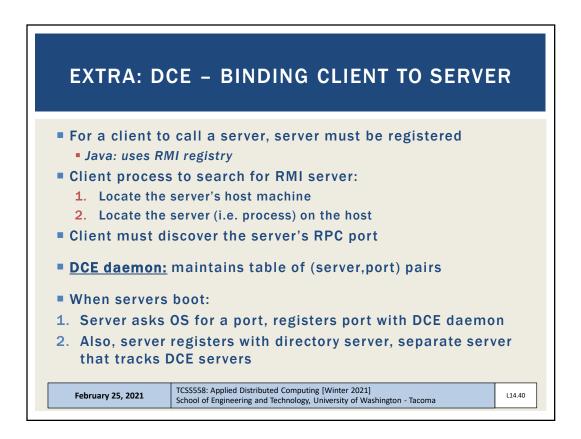

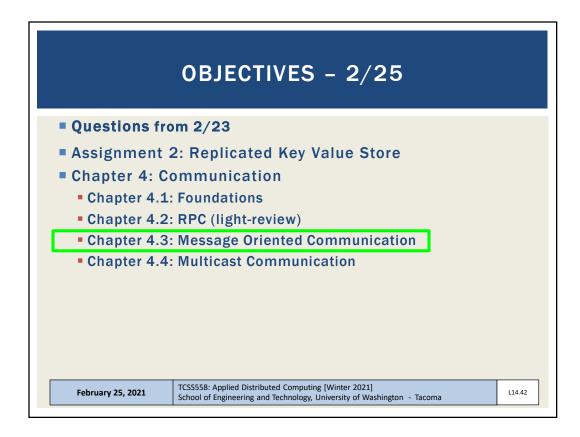

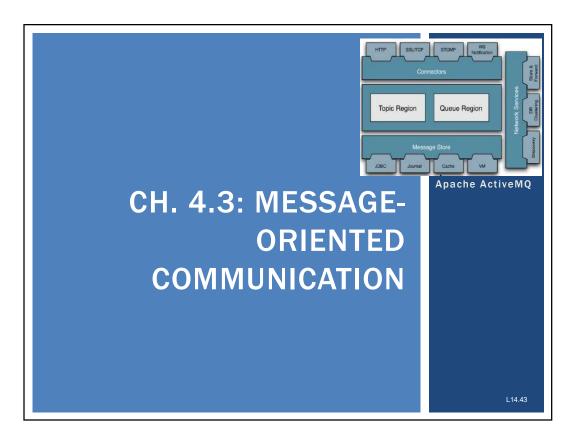

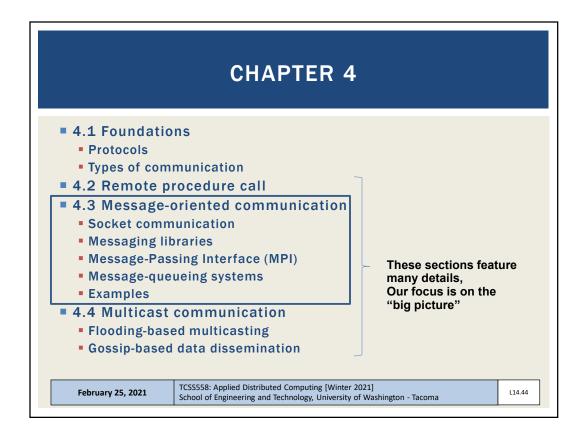

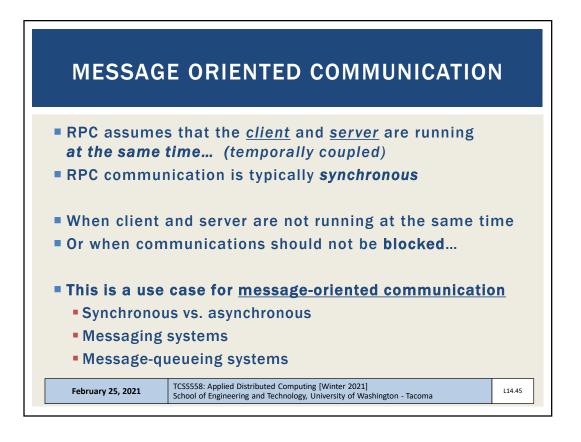

TCSS 558: Applied Distributed Computing [Winter 2021] School of Engineering and Technology, UW-Tacoma

	SOCKETS						
Application	cation end point ons can read / write data to s to file streams for I/O, but <u>network streams</u>						
Operation	Description						
socket	Create a new communication end point						
bind	Attach local address to socket (IP / port)						
listen	Tell OS what max # of pending connection requests should be						
accept	Block caller until a connection request arrives						
connect	Actively attempt to establish a connection						
send	Send some data over the connection						
receive	Receive some data over the connection						
close	Release the connection						
February 25, 202	TCSS558: Applied Distributed Computing [Winter 2021] School of Engineering and Technology, University of Washington - Tacoma L14.46						

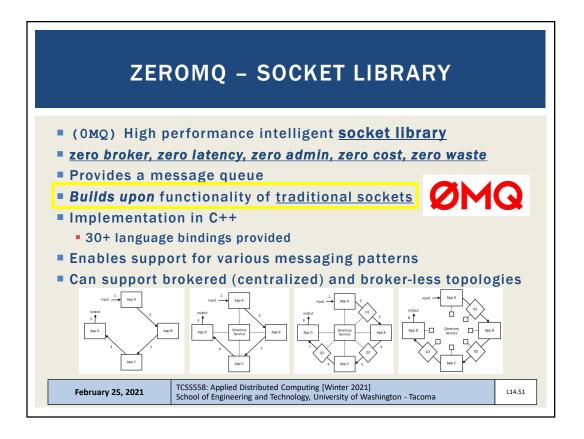

SOCKETS - 2						
Methods ref	cute 1 st - 4 operations (socket, bind, listen, accept er to C API functions cross different libraries will vary (e <i>.g. Java</i>))				
Operation	Description					
socket	Create a new communication end point					
bind	Attach local address to socket (IP / port)					
listen	Tell OS what max # of pending connection requests should be					
accept	Block caller until a connection request arrives					
connect	Actively attempt to establish a connection					
send	Send some data over the connection					
receive	Receive some data over the connection					
close	Release the connection

COMMON MPI FUNCTIONS	
MPI - no recovery for process crashes, network partitions	
Communication among grouped processes: (groupID, processID)	
IDs used to route messages in place of IP addresses	
Operation	Description
MPI_bsend	Append outgoing message to a local send buffer
MPI_send	Send message, wait until copied to local/remote buffer
MPI_ssend	Send message, wat until transmission starts
MPI_sendrecv	Send message, wait for reply
MPI_isend	Pass reference to outgoing message and continue
MPI_issend	Pass reference to outgoing messages, wait until receipt start
MPI_recv	Receive a message, block if there is none
MPI_irecv Check for incoming message, <u>do not block!</u>	
February 25, 2021	TCSS558: Applied Distributed Computing [Winter 2021] School of Engineering and Technology, University of Washington - Tacoma

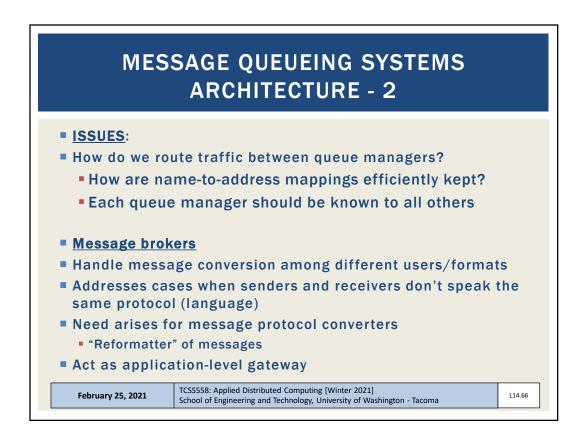

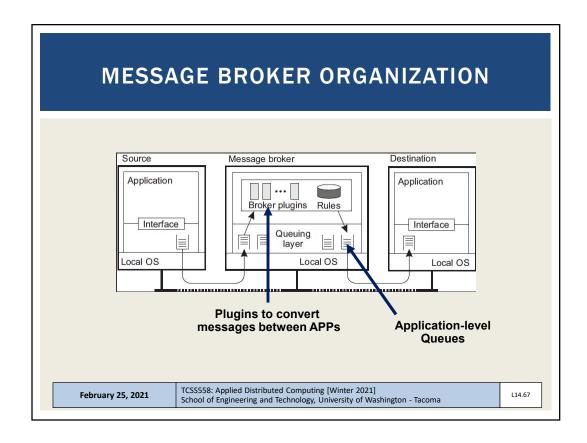

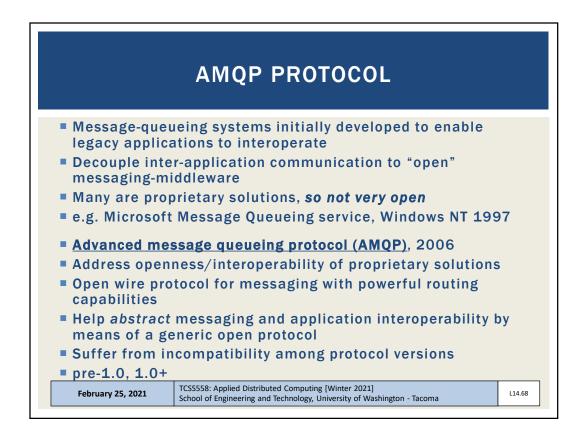

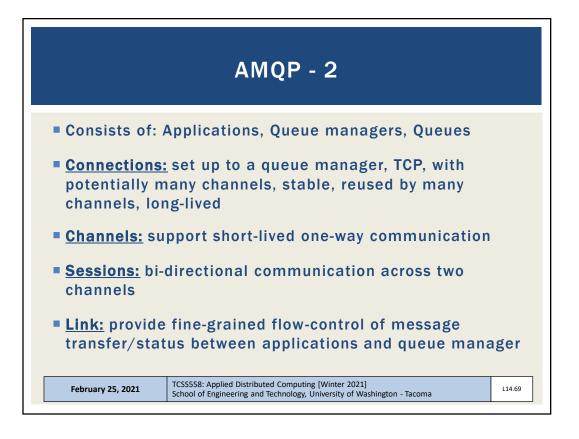

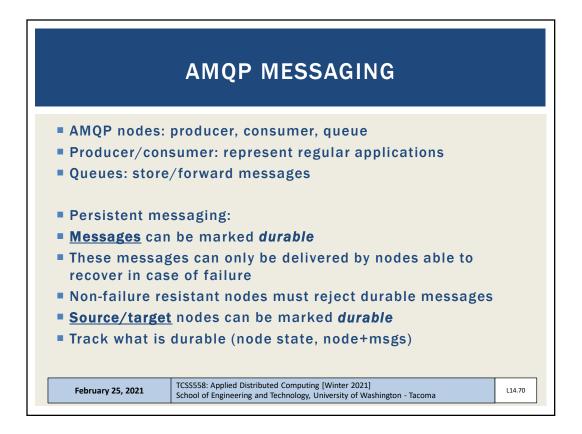

L14.71

- RabbitMQ, Apache QPid
 - Implement Advanced Message Queueing Protocol (AMQP)
- Apache Kafka
 - **Dumb broker** (message store), similar to a distributed log file
 - Smart consumers intelligence pushed off to the clients
 - Stores stream of records in categories called topics
 - Supports voluminous data, many consumers, with minimal O/H
 - Kafka <u>does not track</u> which messages were read by each consumer
 - Messages are removed after timeout
 - Clients must track their own consumption (Kafka doesn't help)
 - Messages have key, value, timestamp
 - Supports high volume pub/sub messaging and streams

February 25, 2021

TCSS558: Applied Distributed Computing [Winter 2021] School of Engineering and Technology, University of Washington - Tacoma

 OBJECTIVES - 2/25

 • Questions from 2/23

 • Assignment 2: Replicated Key Value Store

 • Chapter 4: Communication

 • Chapter 4: Foundations

 • Chapter 4.2: RPC (light-review)

 • Chapter 4.3: Message Oriented Communication

 • Chapter 4.4: Multicast Communication

 • Chapter 4.4: Multicast Communication
