

# TCSS 558: APPLIED DISTRIBUTED COMPUTING

## Types of Distributed Systems

Wes J. Lloyd  
School of Engineering  
& Technology (SET)  
University of Washington - Tacoma

## OBJECTIVES - 1/12

### ■ Questions from 1/7

- Activity: Design goals of distributed systems
- Chapter 1.3 - Types of distributed systems
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - Mobile systems
    - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.2

## TCSS 558 OFFICE HOURS – WINTER 2021

- Fridays 11:30a - 12:30p via Zoom
  - ZOOM link shared weekly via Canvas announcements
- Tuesdays 3:30p after class
- Thursdays 3:30p after class
  - Same ZOOM link as class
- By email appointment: [wlloyd@uw.edu](mailto:wlloyd@uw.edu)
  - Zoom link sent by email

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.3

## ONLINE DAILY FEEDBACK SURVEY

- Daily Feedback Quiz in Canvas – Available After Each Class
- Extra credit available for completing surveys **ON TIME**
- Tuesday surveys: due by Wed @ 10p
- Thursday surveys: due Mon @ 10p

Upcoming Assignments

TCSS 558 - Online Daily Feedback Survey - 1/5  
Not available until Jan 5 at 1:30pm | Due Jan 6 at 10pm | -/1 pts

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.4

**TCSS 558 - Online Daily Feedback Survey - 1/5**

Due Jan 6 at 10pm    Points 1    Questions 4  
Available Jan 5 at 1:30pm - Jan 6 at 11:59pm 1 day    Time Limit None

**Question 1** 0.5 pts

On a scale of 1 to 10, please classify your perspective on material covered in today's class:

1	2	3	4	5	6	7	8	9	10
Mostly Review To Me				Equal New and Review					Mostly New to Me

**Question 2** 0.5 pts

Please rate the pace of today's class:

1	2	3	4	5	6	7	8	9	10
Slow				Just Right					Fast

January 12, 2021    TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma    L3.5

## MATERIAL / PACE

- Please classify your perspective on material covered in today's class (23 respondents):
  - 1-mostly review, 5-equal new/review, 10-mostly new
  - **Average - 6.92** (↓ - previous 7.48)
  
- Please rate the pace of today's class:
  - 1-slow, 5-just right, 10-fast
  - **Average - 5.46** (↓ - previous 5.83)

January 12, 2021    TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma    L3.6

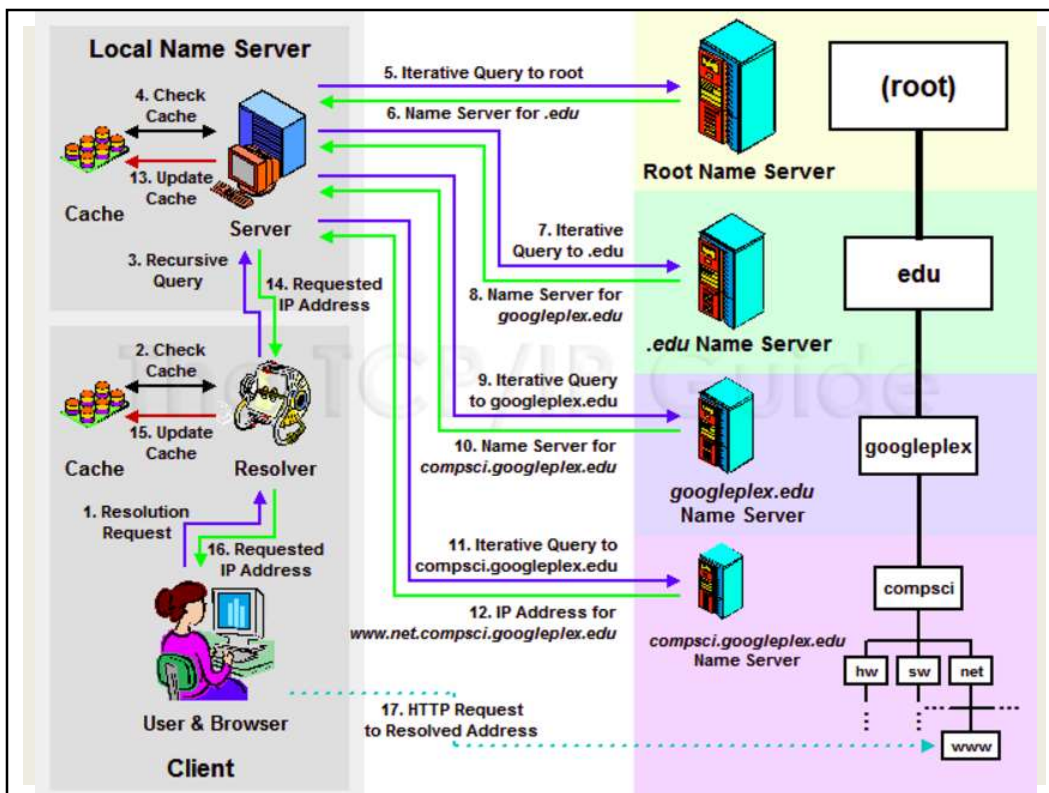

## FEEDBACK FROM 1/7

- *I'm still a bit confused on some approaches to scaling such as DNS and WWW, how they could increase in scale in terms of distributed systems.*
- DNS is covered in Chapter 3.4 on Servers
- The idea is that there is a hierarchy of servers that resolve the translation of a hostname to a numerical address and visa-versa

January 12, 2021

TCCS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

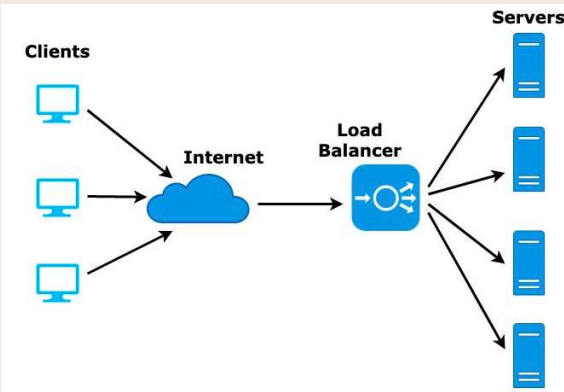

L3.7

## FEEDBACK - 2

- One concept we went over was Load Balancer (or proxy server), its unclear to me how Load Balancers distribute user requests to nodes of a distributed system.

- Client request to the server's IP/Hostname routes the load balancer
- Load balancer decides where to send the client's request based on capacity (how busy?), or location of user's data

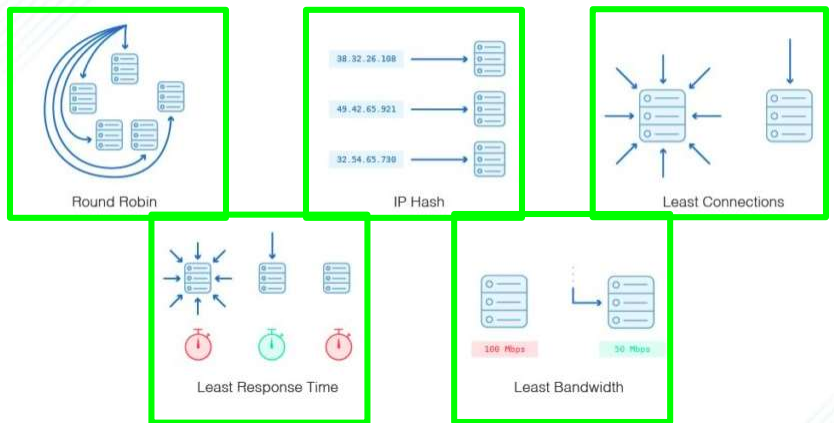

The diagram illustrates the request flow: three client computers on the left send requests to a cloud labeled 'Internet'. From the 'Internet', the request goes to a 'Load Balancer' (represented by a square with a circle and arrows). The Load Balancer then distributes the request to four separate server icons on the right labeled 'Servers'.

January 12, 2021	TCSS558: Applied Distributed Computing [Winter 2021] School of Engineering and Technology, University of Washington - Tacoma	L3.9
------------------	---	------

## METHODS LOAD BALANCERS USE TO ROUTE REQUESTS

### The Five Most Common Load Balancing Methods

The five methods are shown in individual boxes:

- Round Robin:** Shows a circular path of arrows between server icons, indicating a sequential distribution of requests.
- IP Hash:** Shows three IP addresses (38.32.26.108, 49.42.65.921, 32.54.65.730) with arrows pointing to specific server icons, indicating requests are routed based on their IP address.
- Least Connections:** Shows arrows pointing to server icons, with one server having a higher number of arrows, indicating requests are sent to the least busy server.
- Least Response Time:** Shows arrows pointing to server icons, with a red clock icon indicating the server with the fastest response time is chosen.
- Least Bandwidth:** Shows arrows pointing to server icons, with a red '100 Mbps' label and a green '30 Mbps' label, indicating requests are sent to the server with the lowest bandwidth usage.

January 12, 2021	TCSS558: Applied Distributed Computing [Winter 2021] School of Engineering and Technology, University of Washington - Tacoma	L3.10
------------------	---	-------

## FEEDBACK - 3

- *I wonder if parallel computing is just one kind of distributed computing - that is a means to distribute requests to different machines or systems to enhance the computing efficiency*
- >>> **Distributed computing is just one type of parallel computing**
- When accomplishing parallel computing with distributed computing, the question is: ***how fast is the interconnect?***
- Map-Reduce: distribute tasks to nodes that operate over different data so they can run in parallel with no synchronization
  - *This is called embarrassingly parallel*
  - *Not applicable for some tasks*
  - There is no shared memory
  - Many tasks run in isolation at the same time
- Parallel computing also occurs with shared memory systems:
  - On the same computer
  - On a distributed system using special libraries to share memory and high speed inter-connects (e.g. networks)
  - On a super computers with interconnected memory

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.11

## FEEDBACK - 4

- *I think I still get confused about the openness part*
- Design software components of the distributed so that they are easily reusable in other systems
- Software should be:
  - **Interoperable:** work with other components
  - **Portable:** capable of being extracted out of the application and reused
  - **Extensible:** easy to add new features/capabilities over time

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

January 12, 2021      TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma      L3.13

## OBJECTIVES – 1/12

- **Questions from 1/7**
- **Activity: Design goals of distributed systems**
- **Chapter 1.3 – Types of distributed systems**
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - Mobile systems
    - Sensor networks

January 12, 2021	TCSS558: Applied Distributed Computing [Winter 2021] School of Engineering and Technology, University of Washington - Tacoma	L3.14
------------------	---	-------

## CLASS ACTIVITY 1

- We will form groups of ~2-3 and enter breakout rooms
- Each group will complete a Google Doc worksheet
- Add names to Google Doc as they appear in Canvas
- Once completed, one person submits a PDF of the Google Doc to Canvas
- Instructor will score all group members based on the uploaded PDF file
- To get started:
  - Log into your UW Google Account
  - Link to shared Google Drive
  - Follow link:  
<https://tinyurl.com/y5nmmro9>

October 7, 2020

TCCS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L3.15

## OBJECTIVES - 1/12

- Questions from 1/7
- Activity: Design goals of distributed systems
- Chapter 1.3 - Types of distributed systems
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - Mobile systems
    - Sensor networks

January 12, 2021

TCCS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.16

**WE WILL RETURN AT  
2:35PM**

**OBJECTIVES - 1/12**

- **Questions from 1/7**
- **Activity: Design goals of distributed systems**
- **Chapter 1.3 - Types of distributed systems**
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - Mobile systems
    - Sensor networks

January 12, 2021	TCSS558: Applied Distributed Computing [Winter 2021] School of Engineering and Technology, University of Washington - Tacoma	L3.18

## OBJECTIVES - 1/12

- Questions from 1/7
- Activity: Design goals of distributed systems
- Chapter 1.3 - Types of distributed systems
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - Mobile systems
    - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.19

## TECHNOLOGY INNOVATIONS LEADING TO CLOUD COMPUTING

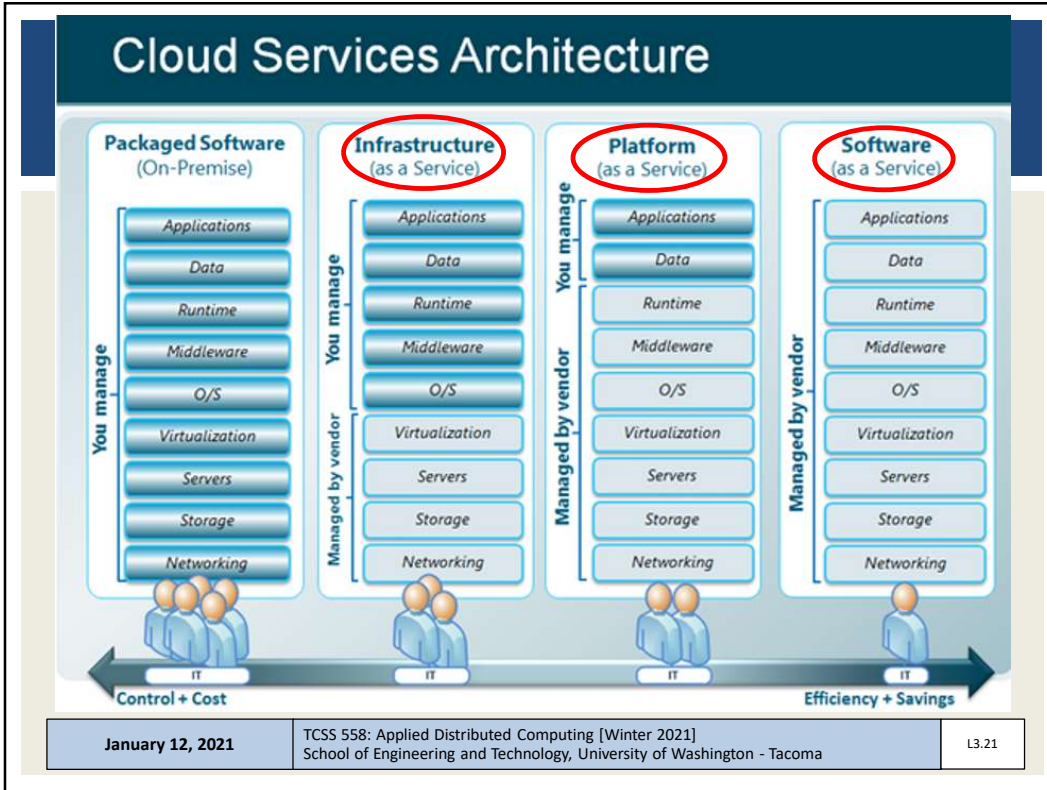

- Super computers
  - Huge multiprocessor system which shares RAM
  - Technically "not distributed"
  - Hardware all in one location
- High performance distributed computing
  - Cluster computing
  - Grid computing
  - Cloud computing
  - Virtualization
  - Others

January 12, 2021

TCSS 558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.20

## PUBLIC CLOUD COMPUTING

- Offers computing, storage, communication at ¢ per hour
- No premium to scale:
 
$$= \frac{1000 \text{ computers}}{1 \text{ computer}} @ \frac{1 \text{ hour}}{1000 \text{ hours}}$$
- Illusion of infinite scalability to cloud user
- As many computers as you can afford
- Leading examples:  
 Amazon Web Services, Google App Engine, Microsoft Azure
- Amazon runs its own e-commerce on AWS!
- Billing models are becoming increasingly granular
  - By the minute, second, tenth of a second
  - Example: AWS Lambda      \$0.0000002 per request  
    \$0.000000208 to rent 128MB / 100-ms

January 12, 2021      TCSS 558: Applied Distributed Computing [Winter 2021]  
 School of Engineering and Technology, University of Washington - Tacoma      L3.22

## PUBLIC CLOUD COMPUTING - 2

### **m4.large ec2 virtual machine:**

2 vCPU cores, 8 GB RAM, Intel Xeon E5-2666 v3  
10¢ an hour, 24 hrs/day,  
30 days/month → \$72.00/month  
on-demand EC2 instance

### **AWS Lambda Function-as-a-Service (FaaS) w/o free tier:**

2 vCPU cores, 3GB RAM, Intel Xeon E5-2666 v3 (maybe?)  
as 2,592,000 x 1-sec service calls  
24 hrs/day, 30 days/month:

**\$130.14 (8GB = \$347.04)**

January 12, 2021

TCSS 558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.23

## PAAS SERVICES IMPLEMENTATION

- PaaS services often built atop of IaaS
  - Amazon RDS, Heroku, Amazon ElastiCache
- Scalability
  - VM resources can support fluctuations in demand
- Dependability.
  - PaaS services built on highly available IaaS resources

January 12, 2021

TCSS 558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.24

## OBJECTIVES - 1/12

- Questions from 1/7
- Activity: Design goals of distributed systems
- Chapter 1.3 - Types of distributed systems
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - Mobile systems
    - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.25

## DISTRIBUTED INFORMATION SYSTEMS

- Enterprise-wide integrated applications
  - Organizations confronted with too many applications
  - Interoperability among applications was difficult
  - Led to many middleware-based solutions
- Key concepts
  - Component based architectures - database components, processing components
  - **Distributed transaction** - Client wraps requests together, sends as single aggregated request
  - Atomic: all or none of the individual requests should be executed
- Different systems define different action primitives
  - Components of the atomic transaction
  - Examples: send, receive, forward, READ, WRITE, etc.

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.26

## DISTRIBUTED INFORMATION SYSTEMS - 2

### Transaction primitives

Primitive	Description
BEGIN_TRANSACTION	Mark the start of a transaction
END_TRANSACTION	Terminate the transaction and try to commit
ABORT_TRANSACTION	Kill the transaction and restore the old values
READ	Read data from a file, a table, or otherwise
WRITE	Write data to a file, a table, or otherwise

### Transactions are **all-or-nothing**

- All operations are executed
- None are executed

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.27

## OBJECTIVES - 1/12

### Questions from 1/7

### Activity: Design goals of distributed systems

### Chapter 1.3 - Types of distributed systems

- HPC, Cluster, Grid, Cloud
- Distributed information systems
  - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
- Pervasive Systems
  - Ubiquitous computing systems
  - Mobile systems
  - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.28

## TRANSACTIONS: ACID PROPERTIES

- **A**tomic: The transaction occurs indivisibly
- **C**onsistent: Transaction does not create variant states across nodes during slow updates (e.g. system variants)
  - Replicas remain constant until all updated
  - Two phase commit: data pushed first, then the commit
- **I**solated: Transactions do not interfere with each other
- **D**urable: Once a transaction commits, change are permanent
  
- **Nested transaction: transaction constructed with many sub-transactions**
- Follows a logical division of work
- Must support “rollback” of sub-transactions

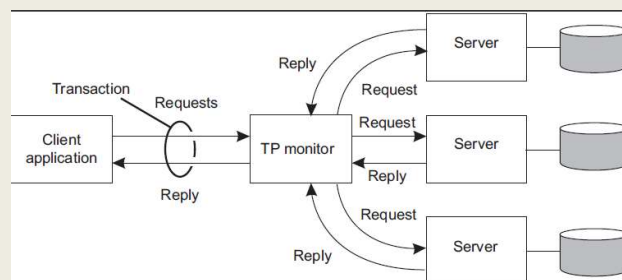

January 12, 2021

TCCS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.29

## TRANSACTION PROCESSING MONITOR

- Allow an application to access multiple DBs via a transactional programming model
- **TP monitor:** coordinates commitment of sub-transactions using a distributed commit protocol (Ch. 8)
- Save application complexity from having to coordinate

January 12, 2021

TCCS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.30

## OBJECTIVES - 1/12

- Questions from 1/7
- Activity: Design goals of distributed systems
- Chapter 1.3 - Types of distributed systems
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - Mobile systems
    - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.31

## ENTERPRISE APPLICATION INTEGRATION

- Support application components direct communication with each other, not via databases
- **Communication mechanisms:**
- **Remote procedure call (RPC)**
  - Local procedure call packaged as a message and sent to server
  - Supports distribution of function call processing
- **Remote method invocation (RMI)**
  - Operates on objects instead of functions
- RPC and RMI - led to tight coupling
- Client and server endpoints must be up and running
- Interfaces coupled to specific languages and not ***interoperable***
- This led to evolution of: **Message-oriented middleware (MOM)**

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.32

## MESSAGE-ORIENTED MIDDLEWARE

- Publish and subscribe systems:
  - Rabbit MQ, Apache Kafka, AWS SQS/SNS
- Reduces tight coupling of RPC/RMI
- Applications indicate interest for specific type(s) of messages by sending requests to logical contact points
- Communication middleware delivers messages to subscribing applications

January 12, 2021

TCCS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.33

## CHALLENGES WITH VARIOUS APPLICATION INTEGRATION METHODS

- Integration via shared data files and transfers
  - Shared data files (e.g. XML)
  - Leads to file management challenges (concurrent updates, etc.)
- Shared database
  - Centralized DB, transactions to coordinate changes among users
  - Common data schema required – can be challenging to derive
  - For many reads and updates, shared DB becomes bottleneck (*limited scalability*)
- Remote procedure call – app A executes on and against app B data. App A lacks direct access to app B data.
- Messaging middleware - ensures nodes temporarily offline later on, can receive messages

January 12, 2021

TCCS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.34

## OBJECTIVES - 1/12

- **Questions from 1/7**
- **Activity: Design goals of distributed systems**
- **Chapter 1.3 - Types of distributed systems**
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - **Pervasive Systems**
    - Ubiquitous computing systems
    - Mobile systems
    - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.35

## PERVASIVE SYSTEMS

- Existing everywhere, widely adopted...
- Combine current network technologies, wireless computing, voice recognition, internet capabilities and AI to create an environment where connectivity of devices is embedded, unobtrusive, and always available
- Many sensors infer various aspects of a user's behavior
  - Myriad of actuators to collect information, provide feedback
- **TYPES OF PERVASIVE SYSTEMS:**
  - Ubiquitous computing systems
  - Mobile systems
  - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.36

## OBJECTIVES - 1/12

- Questions from 1/7
- Activity: Design goals of distributed systems
- Chapter 1.3 - Types of distributed systems
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - Mobile systems
    - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.37

## PERVASIVE SYSTEM TYPE: UBIQUITOUS COMPUTING SYSTEMS

- Pervasive and continuously present
- Goal: embed processors everywhere (day-to-day objects) enabling them to communicate information
- Requirements for a ubiquitous computing system:
  - Distribution - devices are networked, distributed, and accessible transparently
  - Interaction - unobtrusive (low-key) between users and devices
  - Context awareness - optimizes interaction
  - Autonomy - devices operate autonomously, self-managed
  - Intelligence - system can handle wide range of dynamic actions and interactions

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.38

## UBIQUITOUS COMPUTING SYSTEM EXAMPLES

- Apple Watch
- Amazon Echo Speaker
- Amazon EchoDot (single speaker design)
- Fitbit
- Electronic Toll Systems
- Smart Traffic Lights
- Self Driving Cars
- Home Automation

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.39

## UBIQUITOUS COMPUTING SYSTEM EXAMPLE

- Domestic ubiquitous computing environment example:
- Interconnect lighting and environmental controls with personal biometric monitors woven into clothing so that illumination and heating conditions in a room might be modulated, continuously and imperceptibly
- IoT technology helps enable ubiquitous computing

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.40

## OBJECTIVES - 1/12

- Questions from 1/7
- Activity: Design goals of distributed systems
- Chapter 1.3 - Types of distributed systems
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - **Mobile systems**
    - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.41

## PERVASIVE SYSTEM TYPE: MOBILE SYSTEMS

- Emphasis on mobile devices, e.g. smartphones, tablet computers
- New devices: remote controls, pagers, active badges, car equipment, various GPS-enabled devices,
- Devices move: ***where is the device?***
- Changing location: leverage **mobile adhoc network** (MANET)
- MANET is an ad hoc network that can change locations and configure itself on the fly. MANETs are mobile, they use wireless connections to connect to various networks.
- VANET (**V**ehicular **A**d **H**oc **N**etwork), is a type of MANET that allows vehicles to communicate with roadside equipment.

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.42

## OBJECTIVES - 1/12

- **Questions from 1/7**
- **Activity: Design goals of distributed systems**
- **Chapter 1.3 - Types of distributed systems**
  - HPC, Cluster, Grid, Cloud
  - Distributed information systems
    - Transactions
    - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
  - Pervasive Systems
    - Ubiquitous computing systems
    - Mobile systems
    - **Sensor networks**

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.43

## PERVASIVE SYSTEM TYPE: SENSOR NETWORKS

- Tens, to hundreds, to thousands of small nodes
- Simple: small memory/compute/communication capacity
- Wireless, battery powered (or battery-less)
- Limited: restricted communication, constrained power
- Equipped with sensing devices
- Some can act as actuators (control systems)
  - Example: enable sprinklers upon fire detection
- Sensor nodes organized in neighborhoods
- Scope of communication:
  - Node - neighborhood - system-wide

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.44

## PERVASIVE SYSTEM TYPE: SENSOR NETWORKS - 2

- Collaborate to process sensor data in app-specific manner
- Provide mix of data collection and processing
- **Nodes may implement a distributed database**
- Database organization: centralized to decentralized
- In network processing: forward query to all sensor nodes along a tree to aggregate results and propagate to root
- Is aggregation simply data collection?
- Are all nodes homogeneous?
- Are all network links homogeneous?
- How do we setup a tree when nodes have heterogeneous power and network connection quality?

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.45

## CENTRALIZED VS. DECENTRALIZED DATA STORAGE

### Centralized:

### Decentralized:

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.46

## WHO AGGREGATES AND STORES DATA?

- Consider the **tradeoff space** for:
  - sensor network data storage and processing

- Single point-of-failure
- No node coordination
- No node processing or storage
- “Dumb” nodes
- Less expensive node
- More network traffic
- Nodes require high compute power
- “Smart” nodes
- Expensive nodes
- Less network traffic

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.47

## SENSOR NETWORKS - 3

- What are some unique requirements for sensor networks middleware?
  - Sensor networks may consist of different types of nodes with different functions
  - Nodes may often be in suspended state to save power
    - Duty cycles (1 to 30%), strict energy budgets
  - Synchronize communication with duty cycles
  - How do we manage membership when devices are offline?

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.48

## TYPES OF DISTRIBUTED SYSTEMS

- HPC, Cluster, Grid, Cloud
- Distributed information systems
  - Transactions
  - Application Integration: Shared files, DBs, RPC, RMI, Message-oriented middleware
- Pervasive Systems
  - Ubiquitous computing systems
  - Mobile systems
  - Sensor networks

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.49

## QUESTIONS

January 12, 2021

TCSS558: Applied Distributed Computing [Winter 2021]  
School of Engineering and Technology, University of Washington - Tacoma

L3.50
